

Hire in 5 interviews, not 15.

Send us an engineering role. Our AI screens, calls and interviews every applicant, a recruiter checks each one, and your team only spends time on the people worth hiring.

500+

engineering hires delivered

~500

candidates screened for every role

50+

AI interviews run per role

99%

filtered out before you see anyone

How a role runs

01 Role clarity

We turn your job description into a clear scorecard: must-have skills, deal-breakers and salary band.

02 AI screening

Around 500 profiles are scored against that scorecard. Only real matches move forward.

03 AI phone screen

A voice agent calls every match to confirm interest, notice period and salary expectations.

04 30-minute AI interview

Each candidate takes a recorded technical interview, scored skill by skill.

05 You meet the finalists

A recruiter verifies every profile before it reaches you. Most roles close within four or five client interviews.

Every finalist arrives with

- ✓ Resume analysis against your must-haves
- ✓ Phone-screen summary: notice period, CTC, availability
- ✓ Full interview recording and transcript
- ✓ Skill-by-skill scorecard
- ✓ A written reason why they fit, and any risks

USUAL PROCESS	WITH TECHCOSPACE
30+ resumes to sort through	A short list of finalists
10-15 interviews per hire	Built to close in ~5
Keyword-matched profiles	Interviewed and scored
Your engineers do round one	AI and a recruiter do it

Start with one open role.

No retainer, no upfront cost. You pay only when your hire joins.

techcospace.com

The team behind our hiring platform builds AI for enterprises too.

Voice agents, data platforms and automation that run in production, not in a slide deck. We show you a working demo first, then build it into your systems, on your cloud or your own servers.

AI agents

Assistants that answer, call, research and act on your data.

Data intelligence platforms

Pipelines, dashboards and ML models built on messy real-world data.

Workflow automation

Approvals, reports and hand-offs that run themselves.

LLM integration

Fine-tuning and private deployment of language models.

Selected work

GLOBAL WATER & WASTE COMPANY

Financial management system

One portal for ~15 plants: budgets, approvals, SAP reconciliation and an auto-built 38-slide monthly review.

FMCG · 5 MIDDLE EAST MARKETS

AI sales co-pilot

Turns retail audit data into store, product-mix and field-performance insight for sales teams.

INDIAN CONSUMER FOODS GROUP

Revenue growth engine

Four ML models for e-commerce: pricing, promotions, demand sentiment and volume forecasting.

GLOBAL BEVERAGE BRAND

Field intelligence app

Geo-tagged field data with AI image analysis of shelves, coolers and packs.

RENEWABLE ENERGY PRODUCER

Fuel management system

32 fuel centres and 12 plants on one platform, from weighbridge to SAP export.

RESEARCH & DATA CLIENT

Data enrichment agent

1.83M records matched to public profiles, with people reviewing only the uncertain matches.

Demo first

You see a working prototype before you commit to a full build.

Private by default

Deploy on your cloud or your own servers. Your data stays yours.

Built by engineers

The people you talk to are the people who build and run it.

Hiring results

Information Security & Compliance Engineer hired after 4 client interviews

i95Dev · AI hiring

QA Engineer role closed in about two weeks, with the first finalist selected
